

Decoder and Residual Autoregressive Rollout

Low-resolution token map is reconstructed to a high-resolution next-state increment

$$\hat{x}_{t+1} = x_t + \Delta y_{t+1}$$

Reshape
B x 256 x 45 x 90

Upsampling
PixelShuffle
x2 then x2

Prediction head
1x1 Conv to 4 fields

Residual output
predict Delta
y, add x-last
